## There Is Nothing As Reliable As The Speed And Dead-On Repeatability Of Cam Motion...

**Stelron Components** is a family owned company with almost a half century's experience in designing and manufacturing custom cams and cam driven motion devices. Their products are crafted with a tool maker's pride and quality, and customer service is done with a personal touch. Leading companies throughout North America depend on Stelron for the quality, reliability and responsive service.

### Rotary Indexers

The RD is designed for dial applications with 2 to 32 stop positions, and offers a wide range of standard dwell and index sequences.

Low profile design, large center pass-thru and multiple output shaft options allow simplified integration and synchronization of other cam driven devices

The RS and PS Indexers provide precise indexing with controlled acceleration and deceleration for shaft drive applications

All Stelron Indexers feature large hardened and CNC profile ground cams, with replaceable cam followers and Lexan inspection ports.

### Cam Actuators

Stelron offers a wide range of single axis and multi-axis cam driven linear actuators such as pick-and-place units, reciprocators, walking beam actuators and cam presses.

Linear units can be synchronized with Stelron indexers or precision chassis for high speed automation.

### Precision Chassis

Stelron offers precision link, walking beam and rotary synchronous chassis for demanding high speed assembly applications. One company with all the building blocks - Stelron
